

# HOIST

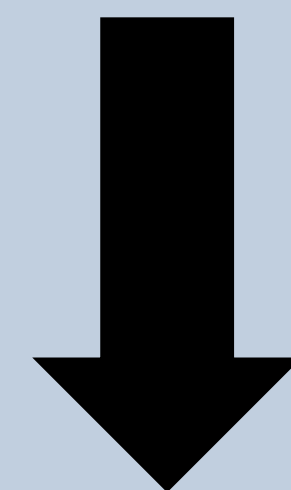

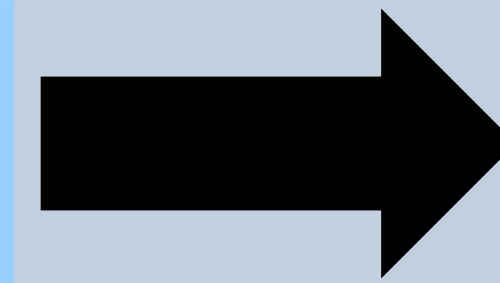

Photoshop script to convert designs to CODE

## Summary:

“HOIST” is a Photoshop Script plugin to convert a Photoshop Document (PSD) into a html and CSS code used for standard static web page.

A Photoshop Script is an approach to automate Photoshop using its JavaScript object model. Photoshop Application Programming Index (API) allows user to use Photoshop object model to automate filters, functionalities and effects or convert a document into various format.

“HOIST”, extracts all the information from the PSD file and converts the possible effect into its HTML and CSS code.
